LUNA2000-(5-30)-S0

# Quick Guide

HUAWEI TECHNOLOGIES CO., LTD.

HUAWEI

# 1 Product Overview

LUNA2000 Battery Appearance

The LUNA2000 battery is applicable to the grid-tied or off-grid systems of residential rooftop PV plants. It can store and release electric energy based on service requirements.

Note: The 15 kWh model is used as an example.

Power Control Module and Battery Expansion Modules

The LUNA2000 battery consists of a power control module and battery expansion modules. The power control module is 5 kW, and a battery expansion module has a standard capacity of 5 kWh.

Note a: (Optional) Remove the plastic cap and install a locking screw for the DC switch to prevent misoperations.

Battery Capacity Description

The battery supports power and capacity expansion. Two power control modules can be connected in parallel. One power control module supports a maximum of three battery expansion modules.

30 kWh
— Signal cable   — DC input cable   IB01W00008

The residential rooftop PV system for grid connection generally consists of the PV module, LUNA2000 battery, grid-tied inverter, management system, AC switch, and power distribution box (PDB).

Note：Dashed boxes indicate optional components.

2 Device Installation

2.1 Installation Requirements

Installation Environment
⚠ **DANGER**

If a battery pack is dropped or violently impacted during installation, internal damage may occur. Do not use such battery packs; otherwise, safety risks such as cell leakage and electric shock may arise.

IB01Y00001

Installation Environment Requirements
- The installation and use environment must meet relevant international, national, and local standards for lithium batteries, and are in accordance with the local laws and regulations.
- Ensure that the battery is not accessible to children and away from daily working or living areas, including but not limited to the following areas: studio, bedroom, lounge, living room, music room, kitchen, study, game room, home theater, sunroom, toilet, bathroom, laundry, and attic.
- When installing the battery in a garage, keep it away from the drive way. It is recommended that the battery be mounted on the wall higher than the bumper to prevent collision.
- When installing the battery in a basement, keep good ventilation. Do not place flammable or explosive materials around the battery. It is recommended that the battery be mounted on the wall to avoid contact with water.
- Install the battery in a dry and well-ventilated environment. Secure the battery on a solid and flat surface.
- Install the battery in a sheltered place or install an awning over it to avoid direct sunlight or rain.
- Install the battery in a clean environment that is free from sources of strong infrared radiation, organic solvents, and corrosive gases.
- For areas prone to natural disasters such as floods, debris flows, earthquakes, and typhoons/hurricanes, take corresponding precautions for installation.
- Keep the battery away from fire sources. Do not place any flammable or explosive materials around the battery.
- Keep the battery away from water sources such as taps, sewer pipes, and sprinklers to prevent water seepage.
- Do not install the battery in a position where it is easy to touch as the temperature of the chassis and heat sink is high when the battery is running.
- To prevent fire due to high temperature, ensure that the vents and the cooling system are not blocked when the battery is running.
- Do not expose the battery to flammable or explosive gas or smoke. Do not perform any operation on the battery in such environments.
- Do not install the battery on a moving object, such as ship, train, or car.
- In backup power scenarios, do not use the battery for the following situations.
  a. medical devices substantially important to human life.
  b. control equipment such as trains and elevators, which may cause personal injury.
  c. computer systems of social and public importance.
  d. locations near medical devices.
  e. other devices similar to those described above.
- Do not install the battery outdoors in salt-affected areas because it may corrode. A salt-affected area refers to the region within 500 meters from the coast or prone to sea breeze. The regions prone to sea breeze vary with weather conditions (such as typhoons and monsoons) or terrains (such as dams and hills).

If holes cannot be drilled on the ground, the battery expansion modules must be secured on the wall.

IB01H00003

📖 **NOTE**

- The M6x60 expansion bolts delivered with the battery are mainly used for solid concrete walls and concrete floors. If other types of walls and floors are used, ensure that the walls and floors meet the load-bearing requirements (one battery expansion module weighs 50 kg) and select the bolts by yourself.
- The power control module (DCDC) must be fixed on the wall. If the device is installed in an area prone to earthquakes or vibration, you can mark the battery module mounting holes and drill holes to install expansion bolts in step 2.
2.3 Installing Battery Expansion Modules

1. Install the battery expansion modules and power control module on the support.

> **NOTICE**
>
> • The following describes how to install the battery expansion modules for a 15 kWh model.
> • The installation of battery expansion modules for 5 kWh and 10 kWh models is the same. One battery expansion module is installed for a 5 kWh model, and two battery expansion modules are installed for a 10 kWh model.

Align the first battery expansion module with the support on the floor support.
Install the connecting pieces on both sides and tighten the four screws.

Install the remaining battery modules and power module from bottom to top. After installing a module, secure the left and right connecting pieces, and then install the next module.
IB01H00004

2. Secure the power control module to the wall.

M6 ⬡ ① 5 N·m — You can adjust the connecting piece vertically to align with the screw holes.

Installing the Support for Wall-mounted Installation

📖 NOTE

For floor-mounted installation, the base is 50 mm high. If waterproofing requirements cannot be met, the battery can be installed on a wall. The mounting kits need to be purchased separately. For wall- and floor-mounted installation, ensure that the load-bearing capacity meets the requirements (one battery expansion module weighs 50 kg).

3 Internal Electrical Connections of the Battery

3.1 Installing an Internal Ground Cable

Connect the ground points of modules in sequence, and secure the ground cable using a ground screw.

M4
1.2 N·m

3.2 Installing Internal DC Terminals

① B+ B-
② B+ B-

B+ BAT+

IB01I10001
📖 **NOTE**

- Internal electrical cables are delivered with the battery, see the *Packing List* in the packing case.
- The Amphenol terminal is used as the DC terminal between the power control module and the battery expansion modules.

3.3 Connecting Internal Signal Cables

- The protective housing of the communications terminal delivered with the device can be fastened with clips or screws based on the actual diagram.
- Install the internal signal cables described in this section using the three signal cables with a diameter of 5 mm and rubber plugs delivered with the DCDC. Do not use signal cables with a diameter of 7 mm.
Securing With Clips

② ③ Click

④ ↻ 2 N·m

IB01I40001

- When a communications terminal is connected to a single network cable, a waterproof rubber plug must be installed. Do not install a cable with a diameter of 5 mm into a Φ7 mm rubber plug.
- After inserting the terminal shell into the COM port, shake the terminal shell left and right and pull it back to ensure that it is securely installed, and tighten the nut (ensure that the rubber plug is tightly compressed). Otherwise, the waterproof performance is affected.

IB01I40006

NOTICE

- When a communications terminal is connected to a single network cable, a waterproof rubber plug must be installed. Do not install a cable with a diameter of 5 mm into a Φ7 mm rubber plug.
- After inserting the terminal shell into the COM port, shake the terminal shell left and right and pull it back to ensure that it is securely installed, and tighten the nut (ensure that the rubber plug is tightly compressed). Otherwise, the waterproof performance is affected.

4 External Electrical Connections of the Battery

4.1 Preparing Cables

⚠ **DANGER**

Before connecting cables, ensure that the DC switch on the battery and all the switches connected to the battery are set to OFF. Otherwise, the high voltage of the battery may result in electric shocks.

- Connect cables in accordance with local installation laws and regulations.
- The DC input power cable and signal cable between the battery and the inverter must be less than or equal to 10 m.

Prepare cables based on site requirements.

No.	Cable	Type	Conductor Cross-Sectional Area Range	Outer Diameter
1	Ground cable	Single-core outdoor copper-core cable	10 mm^2	-
2	DC input power cable (inverter to battery and battery to battery)	Common outdoor PV cable in the industry	4–6 mm^2	5.5–9 mm
3	Signal cable (inverter to battery and battery to battery)	Outdoor shielded twisted pair cable (8 cores)	0.20–1 mm^2	6.2–7 mm

## 4.2 Routing Cables Out of the Cable Hole
IB01I10002

NOTICE

Before connecting external cables, route the cables through the cable hole to avoid disconnecting after installation.

4.3 Installing a Ground Cable

NOTE

- Ground a ground point of the power control module.
- Apply silica gel or paint around the ground terminal after the ground cable is connected.

Power control module

M4

1.2 N·m

IB01I50001

13
NOTICE

1. You are advised to connect the battery terminals (BAT+ and BAT−) on the switch side to the inverter and connect the other side to the cascaded battery.
2. For battery terminals, use the delivered Staubli MC4 positive and negative metal terminals and DC connectors. Using incompatible positive and negative metal terminals and DC connectors may burn the cables or damage the module. The resulting device damage will not be covered under warranty.

Assembling DC Connectors

Installing DC Input Power Cables

⚠ **DANGER**

Use dedicated insulated tools to connect cables. Ensure that battery cables are connected to correct polarities. If the battery cables are reversely connected, the battery may be damaged.

❶ BAT−   BAT+
❷ BAT−   BAT+
IB01I30001

4.5 Installing a Signal Cable

NOTICE

- When laying out a signal cable, separate it from power cables and keep it away from strong interference sources to prevent communication interruption.
- Ensure that the protection layer of the cable is inside the connector, that excess core wires are cut off from the protection layer, that the exposed core wire is totally inserted into the cable hole, and that the cable is connected securely.
- Use a plug to block the idle cable hole with the waterproof rubber ring, and then tighten the locking cap.
- If multiple signal cables need to be connected, ensure that the outer diameters of the signal cables are the same.
Communications Terminal Description

6pin–10pin are close to the groove side.

NOTE

It is recommended that the right side of COM port be connected to the inverter and the left side of the COM port be connected to the cascaded batteries. The communications terminal insertion directions on the left and right side of the COM port are different. Insert the communications terminals in the directions shown in the figures.

5 Verifying the Installation

5.1 Installing the Cover

After electrical connections are complete, check that cables are correctly and securely connected, install the external protective cover, and secure it using screws.

IB01H10001

5.2 Verifying the Installation

No.	Acceptance Criterion
1	The battery is installed correctly and securely.
2	The cables are routed properly as required by the customer.
3	Cable ties are secured evenly and no burr exists.
4	The ground cable is connected correctly and securely.
5	The battery switch and all switches connected to the battery are OFF.
6	The DC input power cables and signal cables are connected correctly and securely.
7	Idle terminals and ports are locked by watertight caps.
8	The installation space is proper, and the installation environment is clean and tidy.

6 Power-On Commissioning

6.1 Connecting the Battery Supply

> **NOTICE**
>
> - Power on the LUNA2000 within 24 hours after unpacking. The power-off time cannot exceed 24 hours during maintenance.
> - After turning on the battery switch, power on the inverter. For details about how to power on the inverter, see the quick guide for the corresponding inverter model.
> - If no PV module is configured, press the black start button.

Turn on the DC switch on the battery. After the battery is installed and powered on for the first time, the ring LED blinks for three circles. Observe the battery indicator to check the running status.

Type	Status (Blinking at long intervals: On for 1s and then Off for 1s; Blinking at short Intervals: On for 0.2s and then Off for 0.2s)		Meaning
Running indication			N/A
	Steady green	Steady green	Operating mode
	Blinking green at long intervals	Blinking green at long intervals	Standby mode
	Off	Off	Sleep mode
	Blinking red at short intervals	N/A	Battery power control module environment alarm
	N/A	Blinking red at short intervals	Battery expansion module environment alarm
	Steady red	N/A	Battery power control module fault
	N/A	Steady red	Battery expansion module fault
Battery system indication			N/A
	Display green		Indicates battery level. One bar represents 10%.
	Steady red		The first three bars indicate the number of faulty battery expansion modules.

6.2 Downloading the App

Method 1: Search for FusionSolar on Huawei AppGallery and download the latest installation package.

Method 2: Access https://solar.huawei.com using the mobile phone browser and download the latest installation package.
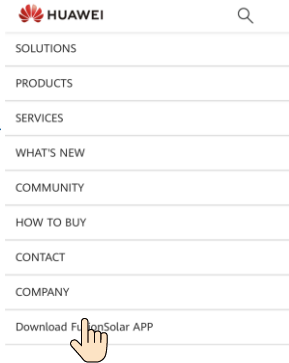

Method 3: Scan the following QR code and download the latest installation package.

FusionSolar

6.3 Battery Deployment

When the app connects to the inverter, a message is displayed, asking you to upgrade the inverter version. Smart Dongle V100R001C00SPC117 and later versions support LUNA2000 battery. But the Smart Dongle cannot be upgraded locally. You need to perform the upgrade through the management system. The upgrade procedure is updated in the Quick Guide. You can scan the QR code on the right to obtain the Quick Guide.

Creating a Plant

Download and install the FusionSolar app of the latest version by referring to the quick guide for the corresponding inverter model or the FusionSolar App Quick Guide. Register as an installer and create a PV plant or owner (skip this step if an account exists). You can obtain the FusionSolar App Quick Guide by scanning the QR code.

Adding Batteries for an Existing Plant

Log in to the FusionSolar app using the installer 's account, choose **My** > **Device Commissioning.** Tap **Quick Settings** on the home screen to add the battery and set the battery working mode.

You can tap ? to obtain the detailed working mode information.
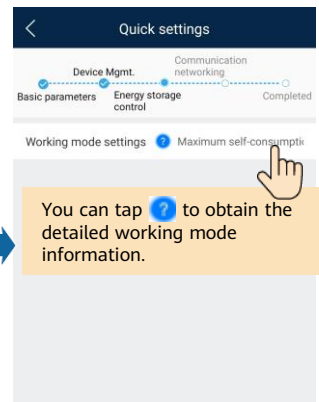

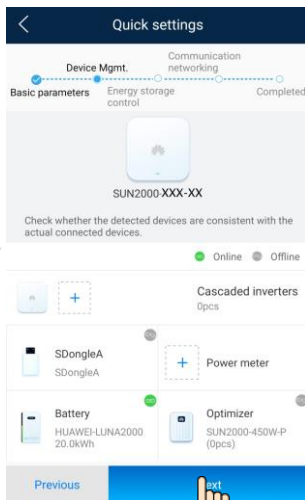

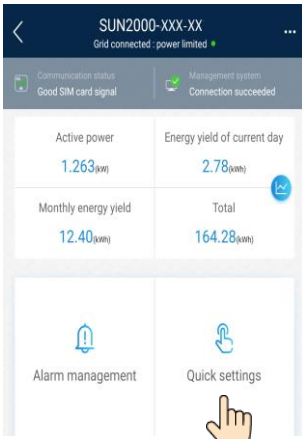

6.4 Setting Battery Control

On the home screen, choose **Power adjustment** > **Battery control**, and set the battery parameters and working mode.
6.5 Battery Status Check

After the battery is added, tap **Device monitoring** on the home screen to view the running status, level, power, and charge and discharge status of the battery.

6.6 Maintenance and Upgrade

Battery Upgrade

When the network is connected, the app connection screen, tap ⋯ > **File download** in the upper-right corner. Then on the home screen, choose **Maintenance** > **Upgrade device** to upgrade the battery version.
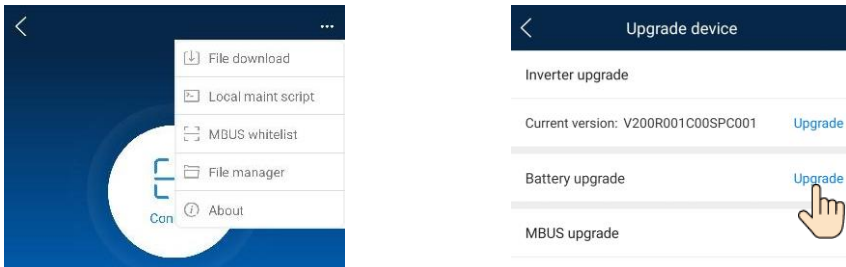

Storage and Recharging

The batteries need to be recharged for a certain period of storage. For details, see the user manual.

Fuse Replacement

If a fuse needs to be replaced, replace it by referring to the user manual.

7 Statement

1. The information in this document is subject to change without notice. Every effort has been made in the preparation of this document to ensure accuracy of the contents, but all statements, information, and recommendations in this document do not constitute a warranty of any kind, express or implied. You can download this document by scanning the QR code.
2. Before installing the device, read the user manual carefully to get familiar with product information and safety precautions.
3. Only certified electricians are allowed to operate the device. Operation personnel must wear proper personal protective equipment (PPE).
4. Before installing the device, check that the package contents are intact and complete against the packing list. If any damage is found or any component is missing, contact your dealer.
5. The device damage caused by the violation of instructions in this document is not covered under warranty.
6. The cable colors involved in this document are for reference only. Select cables in accordance with local cable specifications.
